The Global IP Address Database for Libraries and Publishers

*Please note that some publishers are not currently able to accept IPv6 addresses. For these publishers submission via theIPregistry.org will not activate access via these IP addresses. However, many publishers are working towards the acceptance of IPv6 addresses and when they achieve this, the IPs will be readily available to them through our system.

I confirm that, to the best of my knowledge, these are the correct IP addresses for publishers to use to authenticate access to electronic resources.

Green	This is a verified and correct IP address
Purple	This is a verified and correct IP address, but it is a remote/proxy IP address (e.g the EzProxy or OpenAthens IP).
Amber	This IP address is awaiting verification. If the IP is verified and correct, then please change to Green/Purple, and if the IP is incorrect, then please delete.

If this is the case, you ¬do not need to do anything else. We will inform the Publisher that these IPs are old/incorrect, and they should be removed from their systems.
